James:

Attached is an update on CES Activities. I just had a conversation with Chrishelle Palay and Charlie Duncan with the Texas Low Income Housing Information Service and Mary Randolph with the Texas Organizing Project concerning CES.

There are council members that are interested in the Site (Rep Boykins and another). They want to know what steps the City can take to insure that future industrial operations similar to CES are prohibited on this location. I believe they want this location to be residential. I told them that they needed to work with the City and the State on these issues.

There will be a contingent of residents and these groups at the Council Meeting on Tuesday during the open session to voice their opinions on CES. It is also my understanding that they will be having a press/media conference. It appears that they want to make sure that nothing like CES ever gets to occupy this property again and what the City can do to make sure that this does not happen.

Thanks

Gary Moore
